

## INTERNAL, EXTERNAL CAMERA AND CONTROLLER

The controller with a configurable internal and external front camera is a fatigue detector that saves the data internally in an SD card memory, or in case of having an SMS card installed, transmits them in real time to an app installed on the administrator's cell phone. fatigue warning alarms, and infractions such as looking to one side for too long, smoking and talking on a cell phone while driving, and recognizes and analyzes driver behavior to reduce accidents caused. In addition, the controller is also capable of setting and sending abnormal data in the form of alarms with photo and GPS position through the 4G network to an app on a cellular device of the end user to notify and prevent the occurrence of accidents immediately and the adoption of effective measures in advance.

## Easy installation

Install the system in just 5 seconds due to the "all in one" concept, the wiring and the module are quick to connect. Install the system on the panel, and then by following the installation guide in the mobile app, you can adjust the system for correct operation very quickly.
